

Assignment 1

1. Check and record the system uptime using the 'uptime' command.
2. Display the current date and time using the 'date' command and note the output.
3. Display the calendar for the current month using the 'cal' command.
4. Create a directory named 'LinuxLab' using the appropriate command.
5. Inside 'LinuxLab', create three subdirectories: Docs, Images, and Backup.
6. Create an empty file named 'student.txt' inside the Docs directory.
7. Create two additional files named 'notes.txt' and 'report.txt' using the touch command.
8. List all files and directories in the current location using the 'ls' command.
9. Display the detailed information of files using 'ls -l'.
10. Display files in long format sorted by modification time using 'ls -ltr'.
11. Display your currently logged-in username using the 'whoami' command.
12. Add your name and roll number to 'student.txt' using the Nano editor.
13. Save the file in Nano and exit the editor.
14. Display the contents of 'student.txt' using the 'cat' command.
15. Combine and display the contents of 'student.txt' and 'notes.txt' using a single cat command.
16. Change the permissions of 'student.txt' to 755 using chmod and verify the change.
17. Change the permissions of 'report.txt' to 644 using chmod and verify the change.
18. Delete the file 'notes.txt' and verify that it has been removed.
19. Remove the empty directory 'Backup' using the 'rmdir' command.
20. Delete the entire 'LinuxLab' directory along with all its contents using 'rm -rf' and verify its removal.
